Patient testimonial

Dear Dr. Kahn,

I would like to take this opportunity to thank you and the friendly staff at Meditech for treating my back pain. I am a 21 year old university student and was diagnosed with acutely herniated lumbar disk which was seen as "incurable" by many doctors before visiting your clinic. I was told that if the pain gets worse as I get older, a non guaranteed surgery was the one and only option.

Prior to initiating the Bioflex low intensity laser therapy treatment, I was overwhelmed by various pain killers for 3 years. They never got to the source of the problem and only gave me temporary pain relief. As my body got used to the drugs, they started to have no effect. However, within two weeks (3 short one hour treatments per week) of the laser therapy, I was able to bend down a couple of inches. By 2 months I was able to actually bend down and touch my shoes. It's almost been a year since my last treatment and no pain has returned.

Not only did Dr. Kahn cure my back pain, but he has improved my quality of life as a university student. My marks have improved and I am now able to lie on my back, sit and walk without any discomfort. I recommend the bioflex laser therapy without hesitation. It has no side affects and goes right to the source of the problem. Dr. Kahn, keep up the great work.

Sincerely,

Anwar Ahmed
